

Epilepsy diagnostics in the age of pandemic

Traditionally, epilepsy diagnostics relied on hospital-based testing accessible through major hospitals only and limited by long waiting lists and number of beds.

Gold-standard diagnostic testing can now be done at home, freeing up scarce hospital resources and increasing capacity for treating the expected influx of coronavirus (COVID-19) - related cases.

Our record in supporting Australia's healthcare system

Seer Medical has helped over

2,200

people since 2017

2017 launch	2018	2019	2020 to date
90 patients	378 patients	1,269 patients	521 patients

16,272 inpatient hospital days avoided, equivalent to

45 years

saving the health system over

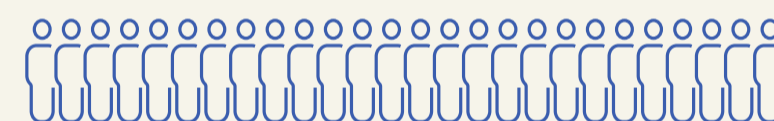

\$20 million

Improved patient wait times

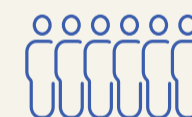

6-18 months

seer

6-8 weeks

Average patient wait times

Maximising hospital capacity

Maximising hospital capacity means diverting elective tests wherever possible and appropriate.

Up to

50 beds

nationally could be released for COVID-19 cases
